Medical Report about the application of O24™ Essential Oil Pain Neutralizer in the Neural Surgery Clinic

O24™ Pain Relief products have been used in the Neural Surgery Clinic here in Bad Homburg, Germany for the last three months.

O24™ Essential Oil Pain Neutralizer was used immediately following surgery and applied on wounds in the LWS and HWS. O24™ Essential Oil Pain Neutralizer products were used primarily within a day after surgery in the HWS and Shoulder/Neck Area as well as during Bandage changes in the LWS area. In addition, I have used O24™ Essential Oil Pain Neutralizer with chronic pain patients during my visitation hours.

Good results can already be seen in the waking phase after surgery. Patients rarely require additional pain medication within the first few hours after surgery. During stationary therapy, around the first day after surgery and during Bandage changes on larger areas of the body such as shoulder, neck and LWS, we applied O24™ Products as a second layer over areas previously treated with Pure Potent Pain Relief. This procedure occurred three to four times daily. The result was a substantial reduction in pain and also reduced edema swelling in the neck area during exposure of the HWS.

In the three months that we have applied the O24™ Essential Oil Pain Neutralizer products we never experienced any cases of discomfort and sensitivity to the peppermint aroma occurred very rarely. During daily procedures, O24™ Essential Oil Pain Neutralizer was used to prepare areas for epidural injections in the Spinal Cord to treat nerve-root blockages and facet-joint blockages.

As a result patients were less sensitive to the injection. We recommend patients use O24™ Essential Oil Pain Neutralizer, especially in situations where we can rely on previous experience to expect positive results and the application of pain medication can be reduced or even eliminated. Therefore the application of O24™ Essential Oil Pain Neutralizer is especially recommended for muscle tension in the shoulder and neck areas and tension in the LWS area. Nearly 30% of all our patients will fall into this criterion each month.

Naturally, only after more extensive study and data collection regarding the usage of O24™ Essential Oil Pain Neutralizer can we make more accurate predictions regarding pain reduction. We should have more concrete data towards the end of 2000. Additionally, we will use questionnaires regarding the effectiveness of O24™ Essential Oil Pain Neutralizer on postoperative patients.

Summary

O24™ Essential Oil Pain Neutralizer is a concentrate of various essential oils without any chemical stabilizers or alcohol. Therefore it can be directly applied to open wounds and mucous membranes as well as for treatment of contusions. In our test groups, the following results were shown:

Applied locally, swelling went down fast and the healing process shortened. Chemical substances, particularly analgesics were not needed when using O24™ Essential Oil Pain Neutralizer. Pain of muscle, joint and ligament was nearly completely removed using O24™ Essential Oil Pain Neutralizer. Healing of wounds was improved. Recovery times for athletes was shorter. Strengthening of the respiratory tract, thus leading to an improved intake of air during severe physical stress are considerable advantages for athletes.
